MD-80 Detail Sheet
for any
1:144 Scale MD-80 Kit

This McDonnell Douglas MD-80 Detail Sheet allows the modeler to apply stenciling and wing detailing to any version of the DC-9 Super 80 series of aircraft. Please keep in mind that stenciling data varies greatly from airline to airline and some small details may have been inadvertently left off while extra ones on the sheet may go unused for the particular aircraft you are modeling. Common grey and white door outlines have been provided, with 2 sets of white for better coverage.

Due to the many different colors and variations used by different airlines, it is almost impossible to cover them all and adequately provide information to their placement and use. However, the general data provided are more than adequate and will allow you to super detail your model. Nonetheless, it is vital that as much information as possible be collected on the particular aircraft you are modeling.

Apply stenciling and wing-spar panels as shown in the drawings above. For wings and engines repeat for the other side. Some parts will not be used. Windows may need to be trimmed off as airlines plug them in certain cases. Extra pieces are provided incase of loss or damage.
